EDUCATION

University of Wisconsin-Madison

B.S. in Computer Science

Madison, WI

Sep 2022 – May 2026

EXPERIENCE

Software Engineering Intern

May 2025 – Aug 2025

Fasoo, Inc.

Seoul, South Korea

- Developed an anomaly detection module for SAST cloud service to predict analysis runtime and identify abnormal analysis executions.
- Trained an XGBoost model on ~700 open-source repositories to predict analysis runtime, achieving an R^2 score of 0.90.
- Integrated the prediction module into the production analysis pipeline and automated retraining and alerting workflows with GitHub Actions.

Software Engineering Intern

Mar 2026 – June 2026

MoDoc AI

Boston, MA (Remote)

- Built a LangGraph-based AI pipeline that converts pediatric health content into multilingual short-form videos for parent education.
- Designed agentic workflows for verifying medical claims before generating scripts and planning video scenes from the validated content.
- Built a clinician review workflow that packages generated scripts, source evidence, and reviewer notes for approval before publication.

AX Engineer

Aug 2026 – Present

LG CNS

Seoul, South Korea

- Analyzed business requirements and existing system architecture for Mizuho Bank's Singapore corporation as part of a next-generation banking system build.
- Translated client requirements into design specifications for the next-generation system.
- Collaborating with cross-functional teams to design and deliver the next-generation banking system.

PROJECTS

Canvas Assistant | *Java, Spring Boot, LangChain, MySQL*

Jan 2026 – May 2026

- Served as Product Owner for a 6-person Agile team, managing GitLab backlog items and prioritizing user stories across three sprints.
- Built LangChain assistant workflows that used Canvas page context to answer course questions and generate structured email or Piazza drafts.
- Developed backend support for chat sessions, course context retrieval, and assistant tool calls through the Spring Boot API.

ClearSplit | *Python, PostgreSQL, AWS, Docker, Azure*

Nov 2025 – Feb 2026

- Built a full-stack iOS app for managing groups, splitting itemized expenses, and generating simplified settlements.
- Implemented FastAPI and PostgreSQL backend logic for balance recomputation, settlement generation, and duplicate request prevention.
- Added S3 receipt uploads, OCR workers, and Azure Container Apps deployment with Docker and GitHub Actions.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL

Backend: FastAPI, Spring Boot, Django

Databases: PostgreSQL, MySQL, Supabase, Redis

ML/AI: LangGraph, LangChain, XGBoost

DevOps & Testing: Docker, GitHub Actions, Azure, AWS, pytest, JUnit
